Ideation Phase
Define the Problem Statements

Date	9 March 2026
Project Name	Malaria Detection using Deep Learning
Maximum Marks	2 Marks

Customer Problem Statement

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A healthcare professional working in a rural clinic	Diagnose malaria quickly and accurately in patients	Manual examination of blood smear images takes a long time and requires expertise	Many clinics lack automated diagnostic systems and trained technicians	Frustrated and worried about delayed treatment
PS-2	A laboratory technician responsible for analysing blood samples	Identify malaria parasites efficiently from microscope images	Examining many samples manually is slow and can lead to human errors	There is high workload and limited technological support in laboratories	Overwhelmed and concerned about diagnostic accuracy
PS-3	A doctor in a primary healthcare centre	Detect malaria in patients at an early stage	Diagnosis depends on manual laboratory reports which take time	Rural healthcare facilities have limited diagnostic equipment	Anxious about delayed diagnosis and treatment
PS-4	A healthcare worker screening large numbers of patients	Quickly identify infected blood samples	Manual inspection of microscope slides is slow and exhausting	The number of samples is high and trained staff are limited	Overworked and concerned about missing infected cases
