Customer Journey Map

Project: Malaria Detection using Deep Learning

SCENARIO: Uploading a microscopic **blood smear image**, detecting malaria using AI, and viewing the diagnostic result.

	ENTICE	ENTER	ENGAGE	EXIT	EXTEND
Steps	Healthcare professional hears about AI-based malaria detection system	User opens malaria detection web application Uploads microscopic blood smear image	System preprocesses the image Deep learning model analyzes blood cells	System displays prediction result Shows infected/ uninfected classification	User saves or reviews previous detection results Uses system for additional samples
Experience	User becomes aware of an automated malaria detection toot that can help reduce manual diagnostic workload.				
Interactions	User begins interacting with the system and prepare to analyze the blood sample.				
Goals & Motivations	Hospital website Web application interface	Web interface (HTML + CSS) Image upload module	Flask backend server Image preproessing module	Result display Prediction dashboard	Result display interface Detection dashboard
Goals & Motivations	User begins interacting with the system and prepare to analyze the blood sample.				
Positive Moments	Hospital website Web application interface	Web interface (HTML + CSS) Image upload module	Flask backend server Image prepocessing module	Result display interface Prediction dashboard	Dashboard Detection history
Goals & Motivations	User begins interacting with the system and prepare to analyze the blood sample.				
Goals & Motivations	Help me find faster diagnostic solutions	Simple and intuitive upload process	Fast automated image analysis	Quick and clear diagnostic output	Add explanation for confidence score
Positive Moments	Provide clear information about system	Simple and intuitive upload process	Concern on correct image format	Uncertainty about interpetion results	Provide analytics and trends for diagnosis
Goals Motivations	Discovering an AI tool that speeds diagnosis	Fast automated image analysis	Fast automated image format	Show processing progress indicator	Lack of additional insights or analytics
Opportunities	Provide clear information about system accuracy	Add image format guidance	Show processing progress indicator	Add explanation and trends for diagnosis
