Define CS, fit into CC

1. CUSTOMER SEGMENT(S) CS

- Healthcare professionals
- Doctors and lab technicians
- Hospital staff in endemic areas

6. CUSTOMER CONSTRAINTS CC

What constraints prevent your customers from taking action or limit their choices of solutions?

- Limited access to advanced diagnostic tools
- High workload, especially in rural or resource-limited healthcare settings
- Lack of expertise in manual diagnosis of malaria

5. AVAILABLE SOLUTIONS AS

Which solutions are available to the customers when they face the problem or need to get the *job done*? What ? What pros & cons do these solutions have?

- Manual microscopy for malaria detection
- Rapid diagnostic tests (RDTs)
- Pros: well-established methods, widely available
- Cons: time-consuming, expertise required, prone to human error

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS

- Manual microscopy is time-consuming.
- Diagnosing malaria requires trained specialists.
- High rates of diagnostic errors.
- Delayed treatment and increased spread of malaria.

9. PROBLEM ROOT CAUSE RC

- Malaria is endemic, putting constant pressure on healthcare systems.
- Shortage of trained healthcare specialists in malaria-prone areas.
- Variability and subjectivity in manual microscopy diagnosis

7. BEHAVIOUR BE

- Healthcare professionals perform manual microscopy to diagnose malaria.
- Double-checks and repeats often necessary due to uncertainty.
- Rely on traditional methods despite knowing limitations.
- May hesitate to adopt new, unproven tools or technology

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS

TR

What triggers customers to act?

- Learning about high rates of malaria misdiagnois in endemic areas.
- Looking for faster and more accurate diagnostic solutions to improve patient care outcomes.

10. YOUR SOLUTION

SL

- AI-based web application for automatic malaria detection using deep learning.
- Healthcare professionals upload microscopic blood smear images.
- Deep learning model analyzes the images to classify cells as infected or uninfected.
- Provides fast and accurate diagnostic results with confidence scores.

8. CHANNELS of BEHAVIOUR

CH

8.1 ONLINE. Visiting the malaria detection website.

- Visiting into the web application and uploading sample images.
- Receiving results via email notification.

8. CHANNELS of BEHAVIOUR

CH

8.1 ONLINE

- Visiting the malaria detection website.
- Logging into the web application and uploading sample images.
- Receiving results via email notification.

8.2 OFFLINE

- Discussing new diagnostic tools in staff meetings and seminars.
- Sharing success stories with colleagues in the healthcare community.
